Prove that if L, M, and N be the algebraical sum of their moments in any one direction round A, B, and C respectively, then L --(M N). 3. Show how to find the centre of gravity of any given heavy particles rigidly connected. Weights 3, 3, 4, 5, 1, 6 are placed in the foregoing order at the successive angles of a regular hexagon; find their centre of gravity. 4. Determine the condition of equilibrium when a heavy body is placed upon a horizontal plane. A pile of four penny pieces stands upon a table; find the greatest possible horizontal distance between the centres of the highest and lowest. 5. What are the conditions of equilibrium of any number of forces in one plane Two heavy rods A OB and COD equal to each other in all respects are movable about a pivot at O where A O and CO are one-third of AB and CD respectively; the system stands upright with B and D upon a smooth floor, and A and C connected by a weightless string of length AO ox CO. Find the tension of the string in terms of the weight of either rod. 6. State the laws of friction. If in the last case the plane be rough, and the string AC be. removed, find the least value of the coefficient of friction in order that the same position may be retained. 7. Find the...
